WATER LOSSES			125.099	MG/Yr

choose entry option: **custom** 15.000 MG/Yr

Developing the Inputs

1. Assemble supporting documents
2. Develop the data inputs
3. Check the metrics

Supporting Documentation

provides more detail on key values

When compiling supporting documents, remember!

- excel spreadsheets, text files preferred over PDFs for tabular data
- include notes on any exceptions, corrections, or data gymnastics included in your audit input calculation

Supporting Documentation

provides more detail on key values

REQUIRED	SUPPLEMENTAL
<input type="checkbox"/> Volume from Own Sources <i>broken down by month and meter</i>	<input type="checkbox"/> Customer Meter Inaccuracy derivation
<input type="checkbox"/> Water Imported <i>broken down by month and meter</i>	<input type="checkbox"/> Average Operating Pressure derivation
<input type="checkbox"/> Water Exported <i>broken down by month and meter</i>	<input type="checkbox"/> Customer Retail Unit Cost derivation
<input type="checkbox"/> Supply Meter Test Records <i>for all supply meters, if conducted</i>	<input type="checkbox"/> Variable Production Cost derivation
<input type="checkbox"/> Volume of Metered Consumption <i>broken down by month and use type/code</i>	<input type="checkbox"/> System Schematic <i>showing locations of Supply and Export Meters</i>

Step 1 – Assemble the Supporting Documents

Indian Health Service
Water Loss Program

Example of Supporting Documentation for all Water Supplied Volumes

- Timeframe for the data requested unless noted otherwise: Calendar Year 2021.
- Format for the data requested: **Excel preferred**, scan or PDF if Excel format not available.

- Calendar Year 2021 water audit, in AWWA Free Water Audit Software format (v6.0) – this version to be delivered to participants with adequate time before the December workshops.
 - Just do your best to complete the worksheet including inputs and interactive data grades.
 - If you also are tracking water loss in your own format, please provide that as well.
- Water Supplied
 - Basic schematic showing where supply meters are located relative to distribution system, including any export or import meters, and pressure zones if applicable
 - Inventory of your finished water meters, import water meters and export water meters – size, type & age.
 - Provide your current policy for flow testing and/or signal calibration of these meters, if you have one.
 - Provide all available records/reports/data from testing and/or calibration activities for each finished water and/or purchase meter

Volume from Own Sources, Water Imported, Water Exported
UNITS = MG

Month	Import M-1	Well 1	Well 2	Well 3	Export E-1	Monthly Distribution Totals
May 2017	125.48	15.33	11.19	45.61	-	197.60
June 2017	170.61	-	55.48	30.59	-	256.68
July 2017	202.11	5.75	60.58	36.22	-	304.67

Unmetered Use	Estimated Volume for 2021 in MG:
WQ flushing	2.35
Complaint flushing	0.059
Repair flushing	0.85
Fire Department	1.758
New construction flushing	2.22
Street cleaning	0.98
Sewer jetting	4.15

Reminders for Billed Metered Authorized Consumption (BMAC) Supporting Documentation:

- * volume billed per customer class (or rate code, or account type) by month
- * highlight and exclude any non-potable customer classes
- * highlight any customer classes (like water utility or facility use) that does not generate revenue (unbilled!)

System Data

Length of Mains

- 1756458 Length of all Water Lines (ft)
- 1580 Number of Fire Hydrants (ea)
- 15 Average Fire Hydrant Lead Length (ft)
- 23700 Length of Fire Hydrant Leads
- 1780158 Total Length of Mains (ft)
- 337.1511364 Total Length of Mains (mi)**

Active Service Connections

- 11081 Total Number of Services
- Adjustments
- Less Number of Fire Service Meters on Lateral Tees
- Less Number of Fire Service Meters on Manifolds
- Less Number of M&I Meters on Manifolds
- Plus Number of Manifolds
- 1347 Subtotal Adjustments
- 9734 Total Active and Inactive Service Connections**

Water System Zones and Pressures

	HIGH psi	LOW psi	AVERAGE psi
ZONE 1	133	110	121.5
ZONE 2	69	51	60
ZONE 3	93	40	66.5
ZONE 4	129	48	88.5
ZONE 5	111	39	75
ZONE 6	115	93	104
ZONE 7	129	40	84.5
ZONE 8	70	68	69
ZONE 9	74	64	69

Cost Data

Customer Retail Unit Cost

Method 1 (revenue / billed metered)

Consumptive revenue (\$) divided by Billed Metered (volume)

Customer Retail Unit Cost - Method 2 (weighted rate)

Customer classes	Volume sold (gal)	% Volume Sold	Rate	Weighted Rate
Residential - Single Family	2,109,495,705	39%	\$ 4.65	\$ 1.83
Residential - Mult Family	1,054,747,852	20%	\$ 4.65	\$ 0.91
Commercial	1,465,920,745	27%	\$ 5.65	\$ 1.54
Municipal	732,960,372	14%	\$ 5.65	\$ 0.77
Total	5,363,124,674			\$ 5.06 water - weighted avg

Sewer revenues	Volume sold (MG)	% Sewer sold	Sewer - single rate	Sewer - prorated
water sold	5363.12	64%	\$ 5.81	\$ 3.74
sewer sold	3448.98			
				\$ 8.80 per 1000 gallons

Variable Production Cost (Primary costs only)

Primary cost	Amount (\$)
chemical	\$1,093,145.38
power	\$2,263,889.57
	\$3,357,034.95
VPC	\$406.89 per MG

Developing the Inputs

1. Assemble supporting documents
 Must-have docs
2. Develop the data inputs
 Good-to-have docs
3. Check the metrics

Developing the Inputs

1. Assemble supporting documents

 Must-have docs

2. Develop the data inputs

 Good-to-have docs

 Build it from supporting docs

 Look for errors. Does the data make sense?

3. Check the metrics

Step 2 – Develop the Inputs

Water Audit Report for: **Pre-Release Example Audit - Review Only**
Audit Year: **2019** **Jan 01 2019 - Dec 31 2019** **Calendar**

To access definitions, click the [input name](#)

Click 'n' to add notes
Click 'g' to determine data validity grade

All volumes to be entered as: MILLION GALLONS (US) PER YEAR

WATER SUPPLIED

Volume from Own Sources: MG/Yr

Water Imported: MG/Yr

Water Exported: MG/Yr

WATER SUPPLIED: MG/Yr

Water Supplied Error Adjustments
choose entry option: VOSEA
WIEA
WEEA

- **Develop the Input**

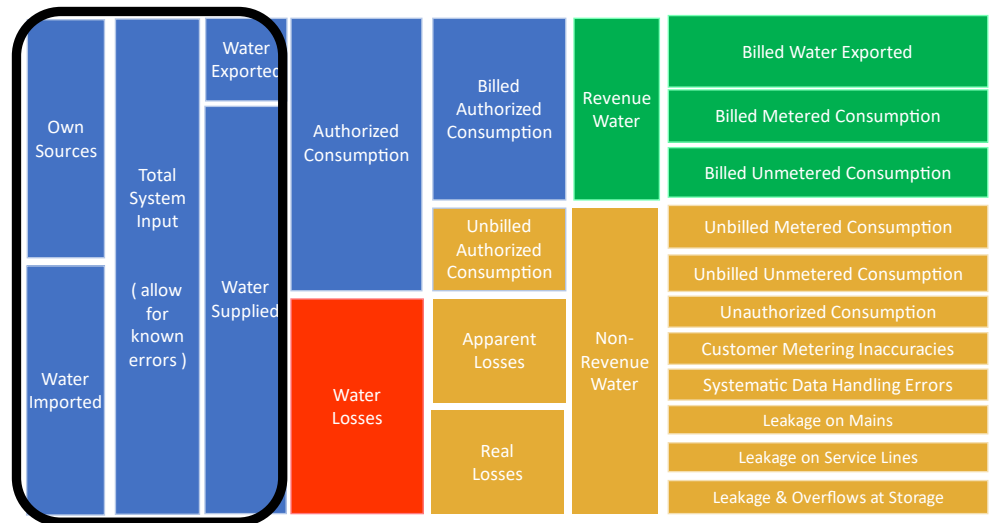

- Trace from production reports
- Trace from testing reports

- **Look for Potential Errors**

- Missing or extra volumes
- Mismatched timeframe
- Error adjustment should be a weighted average of test results (if available)
- Wrong + or – on error adjustment

Potential Errors in Water Supplied

- Meter wear
- Meter location
- Meter selection
- Meter programming
- Flow data archiving

Accuracy results from MFR test bench: 99.5%

Accuracy results from in-situ test: 142.2%

Flow Data Archiving

- Production flow data should be reviewed every business day for data gaps
- Gaps occur due to:
 - Unplanned interruption: lightning strike, power failure
 - Planned interruption: instrumentation calibration
- Gaps in water flow data should be quantified and added back to the daily total

Example of Water Pumping Data Gaps an		
8/15/2012, hrs	High Service Pumping Rate, mgd actual flow	High Service Pumping Rate, mgd raw recorded data
0:00	8.69	8.69
1:00	8.65	8.65
2:00	8.32	8.32
3:00	8.11	8.11
4:00	7.94	0
5:00	8.02	0
6:00	8.44	0
7:00	8.98	0
8:00	9.34	0
9:00	9.25	0
10:00	9.17	0
11:00	9.12	9.12
12:00	9.27	9.27
13:00	9.22	9.22
14:00	9.08	9.08
15:00	8.99	8.99
16:00	9.14	9.14
17:00	9.18	9.18
18:00	9.25	9.25
19:00	9.22	9.22
20:00	8.82	8.82
21:00	8.78	8.78
22:00	8.75	8.75
23:00	8.71	8.71
0:00	8.68	8.68
Total	212.43	151.29
Average	8.85	6.30
Difference		2.55

(Source: AWWA M36 Publication, 4th Ed.)

Step 2 – Develop the Inputs

AUTHORIZED CONSUMPTION

BMAC	Billed Metered:	n	g	9	850.000	MG/Yr
BUAC	Billed Unmetered:	n	g			MG/Yr
UMAC	Unbilled Metered:	n	g			MG/Yr
UUAC	Unbilled Unmetered:	n	g	4	15.000	MG/Yr

choose entry option:
 MG/Yr

AUTHORIZED CONSUMPTION: MG/Yr

WATER LOSSES MG/Yr

Apparent Losses

Default option selected for Systematic Data Handling Errors, with automatic data grading of 3

SDHE	Systematic Data Handling Errors:	n	g	3	2.125	MG/Yr
CMI	Customer Metering Inaccuracies:	n	g	1	8.586	MG/Yr
UC	Unauthorized Consumption:	n	g	3	2.125	MG/Yr

Default option selected for Unauthorized Consumption, with automatic data grading of 3

Apparent Losses: MG/Yr

choose entry option:

• Develop the Input

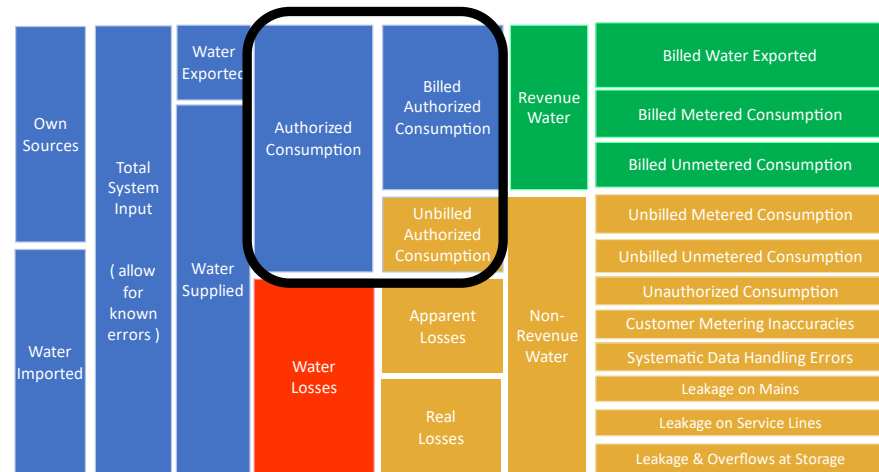

- Trace from billing reports
- Trace from flushing (etc) tracker

• Look for potential errors

- Billing report
- Double counting Water Exported in Billed Metered
- Double counting Unbilled Metered in Billed Metered
- Including leaks / breaks in Unbilled Unmetered

Potential Errors in Authorized Consumption

- Duplicate volumes
- Non-potable volumes
- Missing volumes
- Mismatched timeframes

System Data

Infrastructure information

- Length of Mains (includes hydrants laterals)
- Count of service connections (active and inactive)

Operating Pressure

used to calculate a technical minimum volume of leakage

Cost Data

Total Annual Operating Cost

Customer Retail Unit Cost

Variable Production Cost

Developing the Inputs

1. Assemble supporting documents

Must-have docs

2. Develop the data inputs

Good-to-get docs

Build it from supporting docs

3. Check the metrics

Look for gremlins

Sanity check

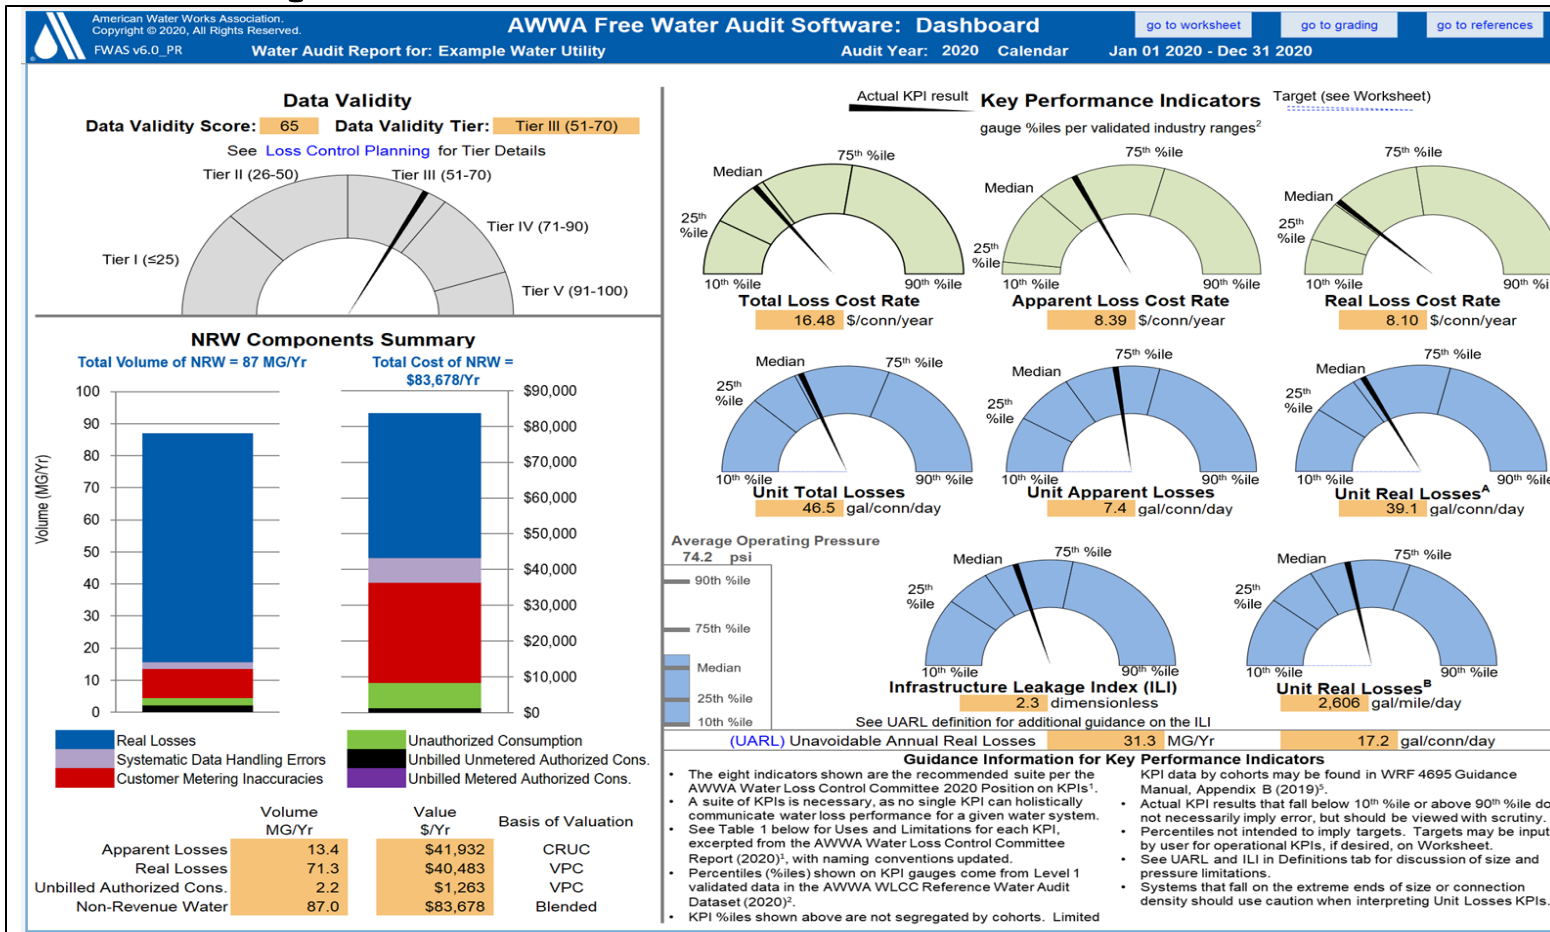

Inside typical ranges

Metrics versus practices

Step 3 – Check the Metrics

• Metrics versus Practices

- Inside the range – are they high, mid, or low?
- How does that compare to the water loss management practices?

The Big Picture

3-V

Data Validity Grades

Data validity grades (DVGs) document utility practices of:

- Data collection
- Data review
- Instrument maintenance

Each audit input is automatically assigned a DVG between 1 and 10 based on answers to IDG criteria questions

DVG criteria are predominantly qualitative

DVGs are NOT a measure of accuracy!

vos	Criteria Question	Select Best-Fit Answers to All Visible Questions
vos.0	Did the water utility supply any water from its own sources during the audit year?	Yes
vos.1	What percent of own supply volume is metered?	>99%
<p>For questions 2-10 below: Choose the answer that applies for those meters that measure >90% of the finished water volume.</p> <p>In-situ flow accuracy testing refers to a test process that confirms the flow measuring accuracy of the primary device (the flowmeter), in its installed location.</p> <p>Electronic calibration refers to a process that checks for error in the metering secondary device(s) and/or the tertiary device(s).</p> <p>Secondary device can include meter transmitter, DP cell, chart recorder or similar instrumentation.</p> <p>Tertiary device can include SCADA, historian or other computerized archival system.</p>		
vos.2	What is the frequency of electronic calibration?	Annually
vos.3	What level of data transfer errors are checked as part of the electronic calibration process?	Data transfer errors are checked at secondary device(s) AND tertiary device(s)
vos.4	Is the most recent electronic calibration documentation available for review?	Yes
vos.5	What is the frequency of in-situ flow accuracy testing?	Less than annual but within last 5 years
vos.6	Is the most recent in-situ flow accuracy testing documentation available for review?	Yes
vos.7	What are the total volume-weighted average results of in-situ flow accuracy testing (during or closest to audit year)?	
vos.8	Have testing and calibration procedures been closely scrutinized for compliance with procedures described in the AWWA M36 and/or M33 Manual(s)?	At ±6% or greater Between ±3% to ±6% At or within ±3%
vos.9	Which best describes the frequency of finished water meter readings?	
vos.10	Which best describes the frequency of data review for anomalies/errors? These can include numbers that are outside of typical patterns, and zero or 'null' values that may reflect a gap in data recording.

Levels of Validation

Water audit validation aims to:

- Identify and correct errors
- Evaluate and communicate uncertainty

Level 1 – interview & summary records

Level 2 – deep data review

Level 3 – new data from the field

WRF #4372B:

WATER AUDITS IN THE UNITED STATES: A REVIEW OF DATA VALIDITY AND RESULTS

Data quality – the validity, or trustworthiness, of the data

A black and white photograph of a forest. In the foreground, a large, thick, fallen tree trunk lies diagonally across the frame, leaning against a standing tree. The background is filled with many tall, thin, vertical tree trunks, creating a dense forest scene. The lighting is somewhat dim, with some light filtering through the trees in the distance.

If a Water Audit is self-reported in the forest, is it valid?

Water Audit Results Across the Country

- *Water Research Foundation 4372B*
- many audits are unrealistic
 - *more training (ie GA, TN) produces fewer unrealistic audits*
 - *even level 1 validation doesn't fully eliminate unrealistic audits*

	CA	DRBC	GA	TN	TX
total audits	300	517	452	629	2,646
# of unrealistic audits	100	130	74	122	1,065
% of unrealistic audits	33%	25%	16%	19%	40%

sources of uncertainty:

- data source quality (primary measurement or secondary data management)
- methodology (use of the software, selection of data)

2016 UWMP Submitted Data - Unfiltered

		2016 n = 292	2016 n = 292	2016 n = 292	
STATISTIC		<i>min</i>	<i>median</i>	<i>max</i>	UNIT
<i>financial</i>	Customer Retail Unit Cost	\$0.00	\$3.93	\$180,097.61	\$ / 1,000 gal
	Variable Production Cost	\$0.00	\$1,315.45	\$25,007,000.00	\$ / million gal
	NRW as % of Operating Cost	0.00%	3.54%	242305%	% of operating cost
<i>volumetric</i>	Apparent Losses	-4.34	6.36	122.3	gal/ serv conn / day
	Real Losses (serv conns)	-35	19.46	334.54	gal/ serv conn / day
	Real Losses (pressure)	-0.66	0.371	5.31	gal/ serv conn / day / psi
	ILI	-3.03	1.18	17.84	CARL / UARL
	Data Validity Score	2.35	75.33	98.27	points out of 100

ESTABLISHING WATER UTILITY GUIDANCE AND METHODOLOGY FOR WATER AUDIT VALIDATION

Data validation – a quality control process conducted to verify, and improve as needed, the data inputs and gradings of the water audits submitted by water utilities.

Water Loss Audit validation – does not make data inputs or gradings “right” or “wrong”, but merely aligns them with the actual conditions that occurred in the operation of the utility for the audit year

Level 1 -- Top down Data Review

Level 2 -- Top down Data Mining Review

Level 3 -- Bottom up Field Investigation

Purpose of Level 1 Validation

- 1) review of audit methodology and volume derivation
- 2) review of Interactive Data Grading answers

goals: quality and consistency

Purpose of Level 1 Validation

- 1) review of audit methodology and volume determination
- 2) review of Data Validity Grade selection

Level 1 Validation Tools:

- Discussion with Validator
- Supporting Documentation

What does Level 1 water audit validation do?

The Level 1 water audit validation aims to:

- Confirm the accurate application of AWWA M36 water audit methodology and terminology to the utility-specific situation
- Identify/adjust any evident inaccuracies
- Validation of best-fit IDG answers, and understanding the answers in full context of the utility operations

In meeting these goals, the Level 1 validation process results in:

- Data validity grades that reflect utility practices
- Identification of macro-level inaccuracies
- Recommendations for advanced validation activities

What does Level 1 water audit validation *NOT* do?

Level 1 water audit validation is the least rigorous level of validation. The effort and time required to complete Level 1 validation are relatively small. Level 1 water audit validation does not:

- Correct inaccuracies in raw data that may affect summary data and audit inputs
- Investigate data processing and handling to identify and correct inaccuracies
- Study instrument accuracy through field tests to improve the certainty of the water audit
- Corroborate the volume of Real Losses with bottom-up or field investigations of leakage

WRF #5057:

UPDATE TO LEVEL 1 VALIDATION GUIDANCE MANUAL

- **New chapter on AWWA Software v6** that describes the major changes from v5 and how they affect the validation process. This manual assumes that the user is validating a water audit completed using the AWWA Software v6.
- **New content related to audit input validation** that emphasizes key points of consideration when reviewing the methodology used to determine specific input values.
- **Real world examples of supporting documentation** for each audit input, as well as idealized versions to make best practices clear.
- **Updated language** throughout the manual to match AWWA Software v6 and to clarify confusing or ambiguous terminology.
- **Summary of research** related to certification programs and the effect of validation in North America.
- **Revisions based on industry feedback** that was collected from a dedicated advisory group of water loss professionals familiar with the first edition of the manual.

Average Difference in Pre vs Post DVG by Audit Input

Pre-Validated

Pre-Validated vs. Post-Validated Audits

Data Validity Distribution

Pre-Level 1 Validation (Self-Reported)

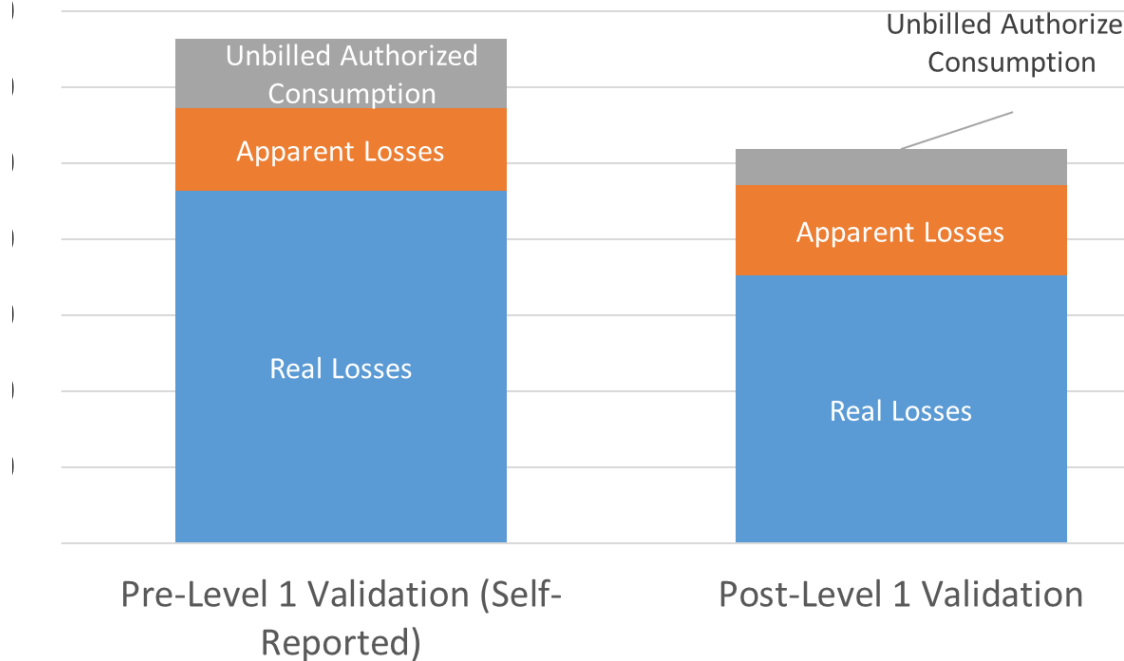

Post-Level 1 Validation

- **Unit errors.** Unit errors typically occur when the auditor enters the volumetric inputs as the wrong unit (i.e. 'gallons' instead of 'million gallons').
- **Method errors.** NRW is the sum of water losses (Apparent and Real Losses) and Unbilled Authorized Consumption.

Summary Review & Wrap-Up

Step 1 – Assemble the Supporting Documents

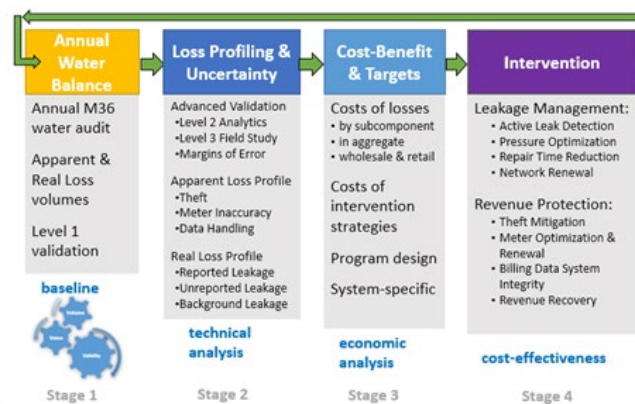

Annual Water Balance, New Reported, Metered

Category	2015	2016	2017	2018	2019	2020
Water Imported	1,200,000	1,150,000	1,100,000	1,050,000	1,000,000	950,000
Water Exported	500,000	480,000	460,000	440,000	420,000	400,000
Water Produced	800,000	780,000	760,000	740,000	720,000	700,000
Water Sold	1,000,000	980,000	960,000	940,000	920,000	900,000
Water Lost	1,000,000	980,000	960,000	940,000	920,000	900,000

The BEST(?) Number

The Big Picture

Supporting Documentation

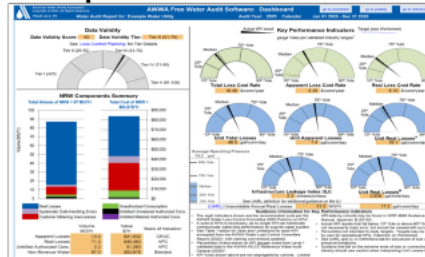

provides more detail on key values

REQUIRED	SUPPLEMENTAL
<input type="checkbox"/> Volume from Own Sources <i>broken down by month and meter</i>	<input type="checkbox"/> Customer Meter Inaccuracy derivation
<input type="checkbox"/> Water Imported <i>broken down by month and meter</i>	<input type="checkbox"/> Average Metering Pressure derivation
<input type="checkbox"/> Water Exported <i>broken down by month and meter</i>	<input type="checkbox"/> Customer Retail Unit Cost derivation
<input type="checkbox"/> Supply Meter Test Records <i>for all supply meters, if conducted</i>	<input type="checkbox"/> Variable Production Cost derivation
<input type="checkbox"/> Volume of Metered Consumption <i>broken down by month and use type/code</i>	<input type="checkbox"/> System Schematic <i>showing locations of Supply and Export Meters</i>

The BEST(?) Number

100

Step 3 – Check the Metrics

- Metrics versus Practices
 - Inside the range – are they high, mid, or low?
 - How does that compare to the water loss management practices?

Step 2 – Develop the Inputs

- Develop the Input
 - Trace from billing reports
 - Trace from flushing (etc) tracker
- Look for potential errors
 - Billing report
 - Double counting Water Exported in Billed Metered
 - Double counting Unbilled Metered in Billed Metered
 - Including leaks / breaks in Unbilled Unmetered

Workshop Evaluation
